

BRANDON WEATHERS

brandon.r.weathers@gmail.com 864-363-8104

Professional Summary:

I will graduate in May of 2026 with a Bachelor's Degree in Applied Computer Science from the University of South Carolina at Aiken. My concentration is in all areas of cybersecurity, with special interests in networking, forensics, and computational biology. I am seeking full-time employment starting from May 2026. I am willing to relocate within the US.

As an undergraduate student, I completed a project to identify chromosomal patterns associated with genetic defects. I reviewed existing research on 'stringology' and 'algorithmic complexity', then developed my own software to detect DNA abnormalities. The practical application of this work is to identify the cause of certain illnesses in human patients. I then published the research in the [Journal of Mathematics and Informatics](#).

I also reviewed existing research on 'intrusion detection' and 'user profiling'. I learned at least four ways to authenticate users: keystroke patterns, temporal records, common location, and user gait analysis. I then developed a system that uses a combination of these approaches to detect intruders. I am continuing this project and plan to publish the results upon completion.

Work History:

Professor's Assistant (2024-2026)

I graded papers for my professor's Discrete Math class. I demonstrated attention to detail and completed all work in a timely manner.

Value added: I graded weekly assignments for approximately 30 students per semester.

Undergraduate Computer Science Researcher (2025-2026)

I worked with a professor and another student to develop software that identifies DNA associated with genetic disorders. I developed a presentation that illustrated research from hypothesis to conclusion. I attended two conferences to present this research to a panel of computer science professors. I received positive feedback that this is a useful research topic, and that there are people interested in collaborating with me.

Valued added: I coauthored and presented a paper on bioinformatics and developed software useful to medical professionals.

For my second research project, I worked 400 hours to perfect an intrusion detection system. My software identifies when an attacker is trying to guess a password. After concluding the project, I presented it to a panel of judges during a regional competition.

Value added: jointly developed an intrusion detection system usable to professionals needing additional security.

Entrepreneur (2020-2022)

I created, operated, and grew a landscaping business while serving multiple customers each week. In addition, I supported the family rental property business by resolving tenant issues that required immediate attention and critical thinking, such as maintaining landscaping and sprinkler systems, performing periodic pressure washing, interior painting, and simple plumbing.

Value added: preformed landscaping services to customers in need

Education:

University of South Carolina at Aiken (GPA: 3.5)

Graduation Date: May 2026 (Bachelor's Degree earned in 3 years)

Bachelor of Science: Applied Computer Science with Cybersecurity concentration

Classes taken include: Data Structures and Algorithms, Computer Organization, Discrete Math, and Information Security

Technical Skills	
Language Proficiency	Java
	Javascript
	HTML
	CSS
	SQL
Interoperability / System Utilities	Git and Github
	Linux & GNU utilities
	OSI model
	Server management
Front End Development	Astro JS framework
	SQL injection techniques
	Microsoft Office and Google suite

Activities:

College Clubs

- Boxing
- Philosophy & Religion

Boy Scouts of America

- **Eagle Scout** - Eight years of consistent work earning 60+ merit badges
- Eagle Scout project - constructed four durable picnic tables for local church
- Served on a team that built a 20x30 ft equipment storage unit
- Taught merit badge classes as an adult volunteer

Rebuild Upstate (Charitable Construction Organization)

- Built two new wheelchair ramps in three days for an elderly homeowner
- Renovated a house by replacing flooring for a disabled senior

Accomplishments:

- **Karate black belt** - Twelve years of physical and mental training. I served as a teacher's assistant at a world class martial arts school in Simpsonville, SC.
- Programming club founder - collaborated with other high school students to produce, maintain, and improve programming projects via website updates
- Scholarship - earned multiple merit-based scholarships to fund college tuition
- College - graduated from the only cybersecurity college certified by the United States military
- Business owner - created and operated a landscaping business for multiple years during high school
- Amateur pianist - performed at senior centers and at church
- Church volunteer - served the church during worship
